MULTITONE CORDLESS HANDSETS

CH74 CORDLESS HANDSET
For use with the CS100 & CS600 Cordless Systems

Features for Everyday Use
The CH74 handset has a large, clear and easy to read screen that is back-lit for subdued lighting conditions or nightime use.
Each handset is also fitted with a vibrate function along with various volume control options for use in noisy environments or for when the user does not want to be disturbed, such as an important meeting.

Enabling You to Stay Mobile
Because many users of cordless handsets remain mobile for most of the day Multitone has built-in as many options as possible to provide users with the information they require. Each handset is capable of storing upto 65 numbers in its telephone directory and users can easily access the last 10 numbers called. A DECT caller ID feature enables you to see who is calling you before you answer the call, very helpful for internal caller identification.

For calls where you need both hands free, the CH74 allows you to activate the personal hands free speech function. You are now able to carry on with the job in hand.

CH74 is also equipped with an auto answer feature. When enabled and used with a standard headset or ear defender headset, calls are automatically answered and released, allowing the user to drive a vehicle or carry out work using both hands.

As many organisations have more than one facility it is possible to register each handset with a maximum of 10 different systems.

This makes it possible and practical to carry a single handset between sites and still remain contactable. With 16 hours continuous use on a fully charged battery it really is possible to stay mobile for the whole day.

The CH74 is able to accept and store upto 14 seperate text messages. As well as storing messages you can also access the last 10 DECT numbers that called, making it very simple to return calls when required.

No More Accidental Calls
The CH74 is fitted with an automatic keypad lock that becomes active after a certain length of time or can also be manually initiated by the user when required.

Language Options
Each handset also has 7 selectable languages, English, German, French, Italian, Spanish, Dutch and Danish. For those customers that require a specific language option that is not already provided one of the above languages can be replaced.
